Nagpur, Maharashtra, India

PROFESSIONAL SUMMARY

B.Tech Data Science undergraduate (2028) building practical machine learning and AI systems, with hands-on experience in computer vision, applied deep learning, and LLM-based systems using Python, TensorFlow, PyTorch, and Hugging Face. Comfortable running full model-experimentation cycles — from data preprocessing and model comparison to evaluation and deployment — demonstrated through an Indian Sign Language recognition system and an LLM-based message classification tool. Strong fundamentals in data structures, statistics, and applied ML, with a track record of self-starting and shipping working systems under time constraints.

EDUCATION

B.Tech, Data Science — G.H. Raisoni College of Engineering, Nagpur — 2028 | CGPA: 8.39/10

HSC (12th) — Maharashtra State Board — 2024 | 60.80%

SSC (10th) — Maharashtra State Board — 2022 | 89.80%

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **ML/DL Frameworks:** TensorFlow, PyTorch, Scikit-learn, Hugging Face
- **Computer Vision:** OpenCV, MediaPipe
- **NLP/GenAI:** LangChain, LLM-based classification (Llama models via Groq)
- **Data Tools:** Pandas, NumPy, Jupyter
- **Other:** Git, GitHub, Flutter, Dart, Figma

AI/ML PROJECTS

Indian Sign Language (ISL) Translator — Python, OpenCV, MediaPipe, TensorFlow/Keras, TFLite, Flutter

- Built a computer-vision pipeline extracting hand landmarks across 35 ISL gesture classes (A–Z, 1–9) from a dataset of 41,175 landmark samples, converting recognized gestures to text and speech.
- Trained and compared Random Forest and MLP classifiers; Random Forest achieved 99.96% accuracy on the held-out dataset (5-fold cross-validation mean ~98.85%, std ~1.30%); measured ~82% accuracy in informal real-world testing on my own hand.
- Converted the trained model to TensorFlow Lite and integrated it into a Flutter Android application for on-device inference.

Relay — WhatsApp Message Notification Router — Python, Groq API, Llama 3.1 8B Instant, Llama 4 Scout, OCR

- Built an LLM-based message classification system during a 24-hour hackathon that routes WhatsApp messages into Notify, Digest, or Mute categories.
- Handled multi-modal inputs — text, image/poster content (via OCR), and voice-note-derived text — using Llama 3.1 8B Instant and Llama 4 Scout served through Groq for low-latency classification.
- Designed a separate deterministic, rule-based scam-detection layer rather than relying solely on the LLM, to keep high-risk classification auditable.

Loan Approval Prediction System — Python, Scikit-learn, Pandas

- Built a modular data-cleaning and feature-selection pipeline and evaluated multiple classification models against standard metrics (accuracy, precision/recall).

EXPERIENCE / PROGRAMS

AWS AI & ML Scholars Program — Udacity — June 2026

- Completed applied milestones covering AWS AI Practitioner fundamentals, a data-analysis project on 4,000+ real-world records, and an end-to-end Generative AI productivity application.

Data Analyst Virtual Internships — Deloitte & Tata Group

- Analyzed business datasets to extract actionable insights using Excel, Tableau, and Power BI; practiced structured problem-solving and technical communication of findings.

LEADERSHIP & EXTRA-CURRICULAR

- **Operations Manager, ACM Student Chapter —** Plan and coordinate technical events with partner student organizations.
- **Team Lead, Civic-Eye (AI Odyssey 2024) —** Led a 4-person team to design and build a civic-awareness application end-to-end under time pressure, coordinating scope and delivery across ambiguous requirements.
